Health, Safety and Environment (HSE) Regarding Offshore Petroleum Activities

OVERVIEW

This workshop equips oil and gas professionals with the knowledge and tools necessary to manage health, safety, and environmental risks in offshore petroleum operations. It addresses global HSE standards, risk prevention, emergency response, and environmental protection in high-risk marine settings. Participants will gain a comprehensive understanding of how to implement proactive safety systems, ensure regulatory compliance, and foster a strong safety and environmental culture that minimizes harm and supports sustainable offshore development.

Audience

Designed for HSE officers, offshore project managers, drilling supervisors, regulatory compliance officers, engineers, environmental consultants, and decision-makers responsible for offshore oil and gas operations. It is especially relevant for those working in deepwater or high-risk offshore environments.

Instructors

Led by HSE experts, offshore safety engineers, and environmental specialists with hands-on experience in managing offshore petroleum operations under international standards. Instructors include former regulators, consultants, and safety auditors with deep expertise in operational risk, regulatory compliance, and incident investigation in the offshore oil and gas industry.
