Prevention Measures, Preparedness, and Response to Security Threats in oil and gaz industry

Security fuels stability

OVERVIEW

This workshop provides oil and gas professionals with the knowledge and tools needed to protect critical energy infrastructure against diverse and escalating security threats. It covers the full spectrum from threat prevention and risk monitoring to emergency response and recovery planning. Participants will gain practical insights into developing integrated security strategies, building institutional preparedness, and strengthening response capacity in high-risk environments. The training aims to empower those responsible for the safety of energy operations to act decisively, proactively, and in alignment with international best practices.

Audience

Designed for security officers, crisis response teams, operational managers, energy policy advisors, risk analysts, and government officials overseeing national energy security. It is also valuable for oil and gas executives seeking to align corporate preparedness with national and international security frameworks.

Instructors

The workshop is led by experts in critical infrastructure protection, oil and gas security strategy, emergency response planning, and cyber-threat mitigation. Instructors include former military and intelligence officers, industry risk consultants, and strategic planners with hands-on experience protecting major energy assets in high-threat environments.
