OVERVIEW

This workshop trains participants to interact strategically with generative AI tools by mastering the art and science of prompt design. Whether used for writing, summarizing, translating, coding, teaching, or analysis, prompt engineering helps professionals unlock the full potential of AI. Participants will walk away with a toolkit for crafting effective prompts, improving output quality, and integrating AI into their daily workflows.

Audience

Designed for professionals, educators, researchers, consultants, content creators, analysts, and managers who regularly use AI tools or plan to integrate AI into their work. No coding background is required—just a need for smart, efficient, and accurate AI output.

Instructors

Led by AI literacy trainers, data science educators, and tech consultants who specialize in applied AI, human-computer interaction, and workflow automation. Instructors offer hands-on experience with top AI platforms and guide participants through industry-specific use cases.
