Evolve

OVERVIEW

This workshop explores the growing impact of AI and cybersecurity on global power dynamics, focusing on how emerging technologies influence state behavior, security strategies, and international competition. It provides professionals with the tools to analyze digital threats, cyber conflicts, and AI-driven shifts in geopolitical influence.

Audience

This workshop is designed for professionals in international security, defense, intelligence, cyber policy, and strategic analysis. It is particularly relevant for diplomats, military officers, cybersecurity specialists, policy advisors, and analysts who operate at the intersection of technology and geopolitics and seek to understand how AI and cyber threats are reshaping the global strategic environment.

Instructors

The workshop will be led by interdisciplinary experts with deep knowledge in artificial intelligence, cybersecurity, and geopolitics. These instructors include senior analysts, defense technology advisors, and academic researchers who specialize in the strategic implications of emerging technologies on global security. Their combined expertise ensures a comprehensive and forward-looking perspective on how digital innovation is redefining power, conflict, and international relations.
