

Conflicts of Laws and Jurisdictions in AI Systems

OVERVIEW

This workshop equips legal professionals, technologists, and regulators with a strategic understanding of the jurisdictional dilemmas surrounding AI systems. Participants will analyze how conflicts of law arise when AI crosses borders, what frameworks exist for resolving these conflicts, and how to anticipate and mitigate legal risk in international AI operations. It fosters critical awareness of the need for harmonization, due diligence, and institutional safeguards in a fragmented legal landscape.

Audience

Designed for legal advisors, compliance officers, policymakers, data protection authorities, technology consultants, in-house counsel, and AI ethics officers. Particularly valuable for institutions deploying or regulating AI systems across multiple legal jurisdictions or in multinational partnerships.

Instructors

Led by international law experts, AI governance scholars, data protection specialists, and cross-border technology lawyers with practical experience in global regulatory harmonization and legal-tech risk management. Instructors provide legal clarity alongside strategic risk mitigation techniques for AI compliance in complex environments.
